

OPERATION AND AGRICULTURE SUPPLY INFORMATION SYSTEM FARMERS' MARKET

The Operation and Agriculture Supply Information System (OASIS) Farmers' Market allows anyone with an Android smart phone to find and buy locally-grown vegetables, fruits, and other produce direct from farmers. The initial screen on application launch displays a geographical map showing the locations of agriculture products. Consumers can review prices and other detailed information in the product listing. All agriculture products are registered by farmers and are sold through them. To ensure that information is correct and can be verified, farmers maintain control on managing what products are listed and how much information to publish. No automated search robots are used to collect arbitrary data. This mobile app is a credible source and provides a service—a virtual farmers' market—for consumers to find local produce from verified producers. Wherever they may be, farmers can use the OASIS Farmers' Market to showcase their products to their local community and to a global audience. Farmers set their own prices based upon their internal decision-making process. Moreover, prices can be in any local currency. American farmers can transact in U.S. Dollars; European farmers can transact in Euros; and Ghanaian farmers can transact in Cedis. All information is accessible from and manageable on a smart phone.

The OASIS Farmers' Market operates on Android devices, version 4.2 (Jelly Bean) or later.

FEATURES AND BENEFITS

Geographic Product Location	GPS coordinates are associated with registered products, enabling the products to be displayed on a geographical map, which then can be easily found by visual reference points
Product Search	Search for products by keyword, which can be a product name, a farmer name, a date, or some other specific text
Product Management	For farmers to register and manage products that they want to market and sell
Customer Orders	For farmers to download and review sales orders that had been submitted by consumers; and for consumers to download and review their submitted orders
Revenue Analysis	For farmers to download and review financial statistics related to current year sales, cumulative sales, number of orders, and average amounts
Multiple Currency Support	Products can be listed and sold in different local currencies
Offline Browsing and Usage	Search results, agriculture products, sales orders, and financial statistics are saved in the local device, allowing the user to browse information when they are disconnected from the Internet
